

# Amycel®

## STRAINS

### Phoenixx

A premium off-white hybrid strain which produces a large heavy bodied mushroom. Phoenixx is an aggressive and productive strain, which produces competitive yields.

### Triple X

Our most vigorous off-white hybrid which is faster in all phases of growing and production. Triple X produces mushrooms with excellent quality and density, and is suited for a wide range of growing conditions.

### Delta

A more moderate pinner compared to our other off-white hybrids. Delta can be tailored to produce a wide variety of size mixes, and is suited for growers looking to produce superior quality mushrooms to compete in the fresh market.

### Heirloom

A heavy-bodied brown hybrid mushroom which is well suited for both portabella and crimini production. Heirloom is the number one selling brown hybrid in the world, and is genetically unique and cannot be cross CAC'ed with any other brown strain.

### Brawn

A brown hybrid mushroom which often produces a darker cap than Heirloom, and is well suited for growers looking to produce a variety of size mixes. Brawn is ideal for growers looking for an alternative to Heirloom, and is genetically unique and cannot be cross CAC'ed with Heirloom or any other brown strain on the market.

nemycel®

beneficial nematode *Steinernema feltiae*

## SUPPLEMENTS

### Promycel Gold • 54% protein

A balanced nutritional content of lipids, carbohydrates, micronutrients, and multiple protein sources. The Gold Standard.

### Titanium • 48% protein

Combines delayed release with inorganic compounds and animal proteins.

### Ultimate • 48% protein

A high yielding supplement that does not contain animal protein. It runs cooler in spawn run and can be used at a higher rate.

### TBS • 41% protein

Blend of basic carbohydrates and protein from plant and animal sources.

### Spawn Mate II SE • 27% protein

Simple carbohydrates and a low protein content that is ideal for oyster production.

### PG Natural 2.0 • 54% protein

All the benefits of Gold and complies with all Organic Production standards.

### SMO PRO 2.0 • 48% protein

Carefully formulated nutrition to provide controllable spawn runs. For use in organic production.

### SMO PRO 58 • 58% protein

Higher protein content in the number one supplement for organic production.
